

Urine Specimens

The surgery has a new protocol for dealing with urine samples. Please complete the attached form with patient details and any clinical indication for the sample and return to the reception. Samples will be tested by one of the nurses in the surgery for any signs of infection. Should this be the case the doctor will be informed and a prescription will be left for collection. Patients should contact the surgery on the same day after 4pm to enquire about their results.

In some instances samples may still need to be sent to the hospital for lab testing. If this is the case you should contact the surgery 24/48 hours after handing in your sample. Please be aware our hospital up lift is at 12pm, your sample maybe sent the following day if handed in at reception after this time.

Please keep this notice for your information.

URINE SPECIMEN

Date of Sample:

Patient's Name:

Patient's date of birth:

Symptoms:

URGENCY	
FREQUENCY	
PAIN	
BLOOD	

Are you Pregnant: Yes No
